

Dyed in the wool

Leather seats are great, but once they start looking a bit tatty they can really let an interior down and re-trims aren't cheap. Enter Dynamix Dyes, with its premier range of leather dyes, which can transform a tired leather interior in an instant. Dynamix can offer dyes in every BMW leather colour under the sun and if you've got a colour that the company doesn't currently have in stock, there's a free colour-matching service to ensure a perfect match. Whether it's your gear knob, steering wheel or seats that are looking their age, Dynamix' range of dyes and leather care products can handle the job and, looking through the gallery on the company's website, it's amazing to see what a bit of dye can do. If your leather is too far gone for dye, then Dynamix Leather Filler can plug small holes and fix minor tears, drying to a flexible finish and can be safely dyed for a truly invisible repair. There's also leather cleaner and conditioner to ensure your seats stay looking great. For further details and pricing log onto the new Dynamix Dyes site at www.dynamixdyes.com, which now has full online shopping facilities.
